

Kubernetes Labs

Lab1:

- 1- create a Deployment run the Nginx image
- 2- see the existing Deployments
- 3- see more detailed information about Deployment
- 4- Change the number of Pods managed by Deployment
- 5- delete the Deployment

Lab 2:

- 1- Create a Pod running a MySQL image
- 2- View Pod details
- 3- Get into the MYSQL pod
- 4- Delete the pods

Lab 3:

- 1- Create a Deployment to run MySQL
- 2- Get into the Pod
- 3- Connect to MYSQL inside the Pod
- 4- Change the number of Replicas for Deployment

Lab4:

- 1- Create namespace called production
- 2- Create a Deployment in the production namespace that includes three replicas of nginx image
- 3- View Pods' status
- 4- Delete one of the three pods
- 5- Delete the Deployment

Lab5:

- 1- Create namespace called test
- 2- Create a Pod running nginx image in the test namespace
- 3- If you delete the Pod, will it be created again? Why?

Lab6:

- 1- Create a namespace called dev
- 2- Create a Deployment in the dev namespace that runs the Apache image
- 3- Change the number of replicas in the Deployment

- 4- Delete the ReplicaSet
- 5- If you delete a Pod, will it be created again? Why?
